Cobre del Mayo, SA de CV—Mexico

Performance Associates is providing its Performance Manager computerized maintenance management system to Cobre del Mayo's Piedras Verde mine in Mexico. The system is being translated into Spanish. Installation and training services will also be provided by Performance Associates.

Barrick Goldstrike—Nevada, USA

Performance Associates is updating the Barrick Goldstrike roaster plant operating manuals produced by Performance Associates a decade ago and migrating the information to a computer-based training (CBT) format.

The end product will be a state-of-the-art CBT system accessible from Barrick's network.

Kinross Gold, Paracatu Mill and Process Plant—Brazil

Performance Associates is preparing comprehensive computer-based operator training system for Kinross' Paracatu gold operation in Brazil. Additionally, Performance Associates developed standard operating procedures for operators at the plant, as well as shift controls to be used by operations supervisors.

Alamos Gold, Mulatos Project—Mexico

Performance Associates is preparing comprehensive hard-copy plant operating manuals covering the crushing, agglomeration, and heap development processes at this heap leach project in Mexico. Additionally, Performance Associates is preparing preventive maintenance (PM) procedures for these circuits.

Highland Valley Copper—Canada

Performance Associates is updating the Highland Valley Copper operating manuals produced by Performance Associates a decade ago and migrating the information to a computer-based training (CBT) format.

The end product will be a state-of-the-art CBT system accessible from HVC's network. Performance Associates *PTracker* will be used to capture test scores and monitor trainee progress.

Anatolia Minerals, Cöpler Project—Turkey

Performance Associates is developing hard-copy operating manuals and training modules for this heap leach gold operation in central Turkey.

Vale Inco, Thompson Refinery—Canada

Performance Associates is developing a SCORM compliant computer-based training (CBT) system for Vale Inco's Thompson Division operations. Selected CBT is being developed for the refinery and concentrator.

The system uses client-server technology to allow access to the system from a secure internet connection. On-line workbooks and tests are incorporated in the system. Performance Associates' learning management system (LMS) is used for delivering content and for data tracking.

Rio Tinto Iron Ore—Australia

Performance Associates is developing SCORM-compliant computer-based training (CBT) content covering operations at the Hope South, Mesa A, Brockman 4, and Paraburdoo iron ore beneficiation plants in Western Australia.

The systems are being developed in Flash for use on Rio Tinto's SAP learning management system (LMS).

San Cristóbal Concentrator—Bolivia

Performance Associates converted the hard-copy plant operating manuals completed several years ago to a SCORM-compliant computer-based learning system. Additionally, Performance Associates also developed computer-based operator training for San Cristóbal's mine mobile equipment.

The system uses client-server technology to allow access to the system from a dedicated plug-in server. On-line workbooks and tests are incorporated in the system. Performance Associates' learning management system (LMS) is used for delivering content and for data tracking.

Vale, Minera Onça Puma—Brazil

Performance Associates is preparing an integrated computer-based training (CBT) system for the nickel mine and processing plant at Onça Puma in Brazil. The CBT system is accessed via a web browser and incorporates on-line workbooks and tests. Trainee records are automatically updated and tracked by the system. Performance Associates will also be conducting on-site start-up training using the CBT program.
